CEE Assignment
Unit-3 Linked list

~~Student Record Management~~

Title:- Library Book Management Using Singly Linked List.

Problem Statement;

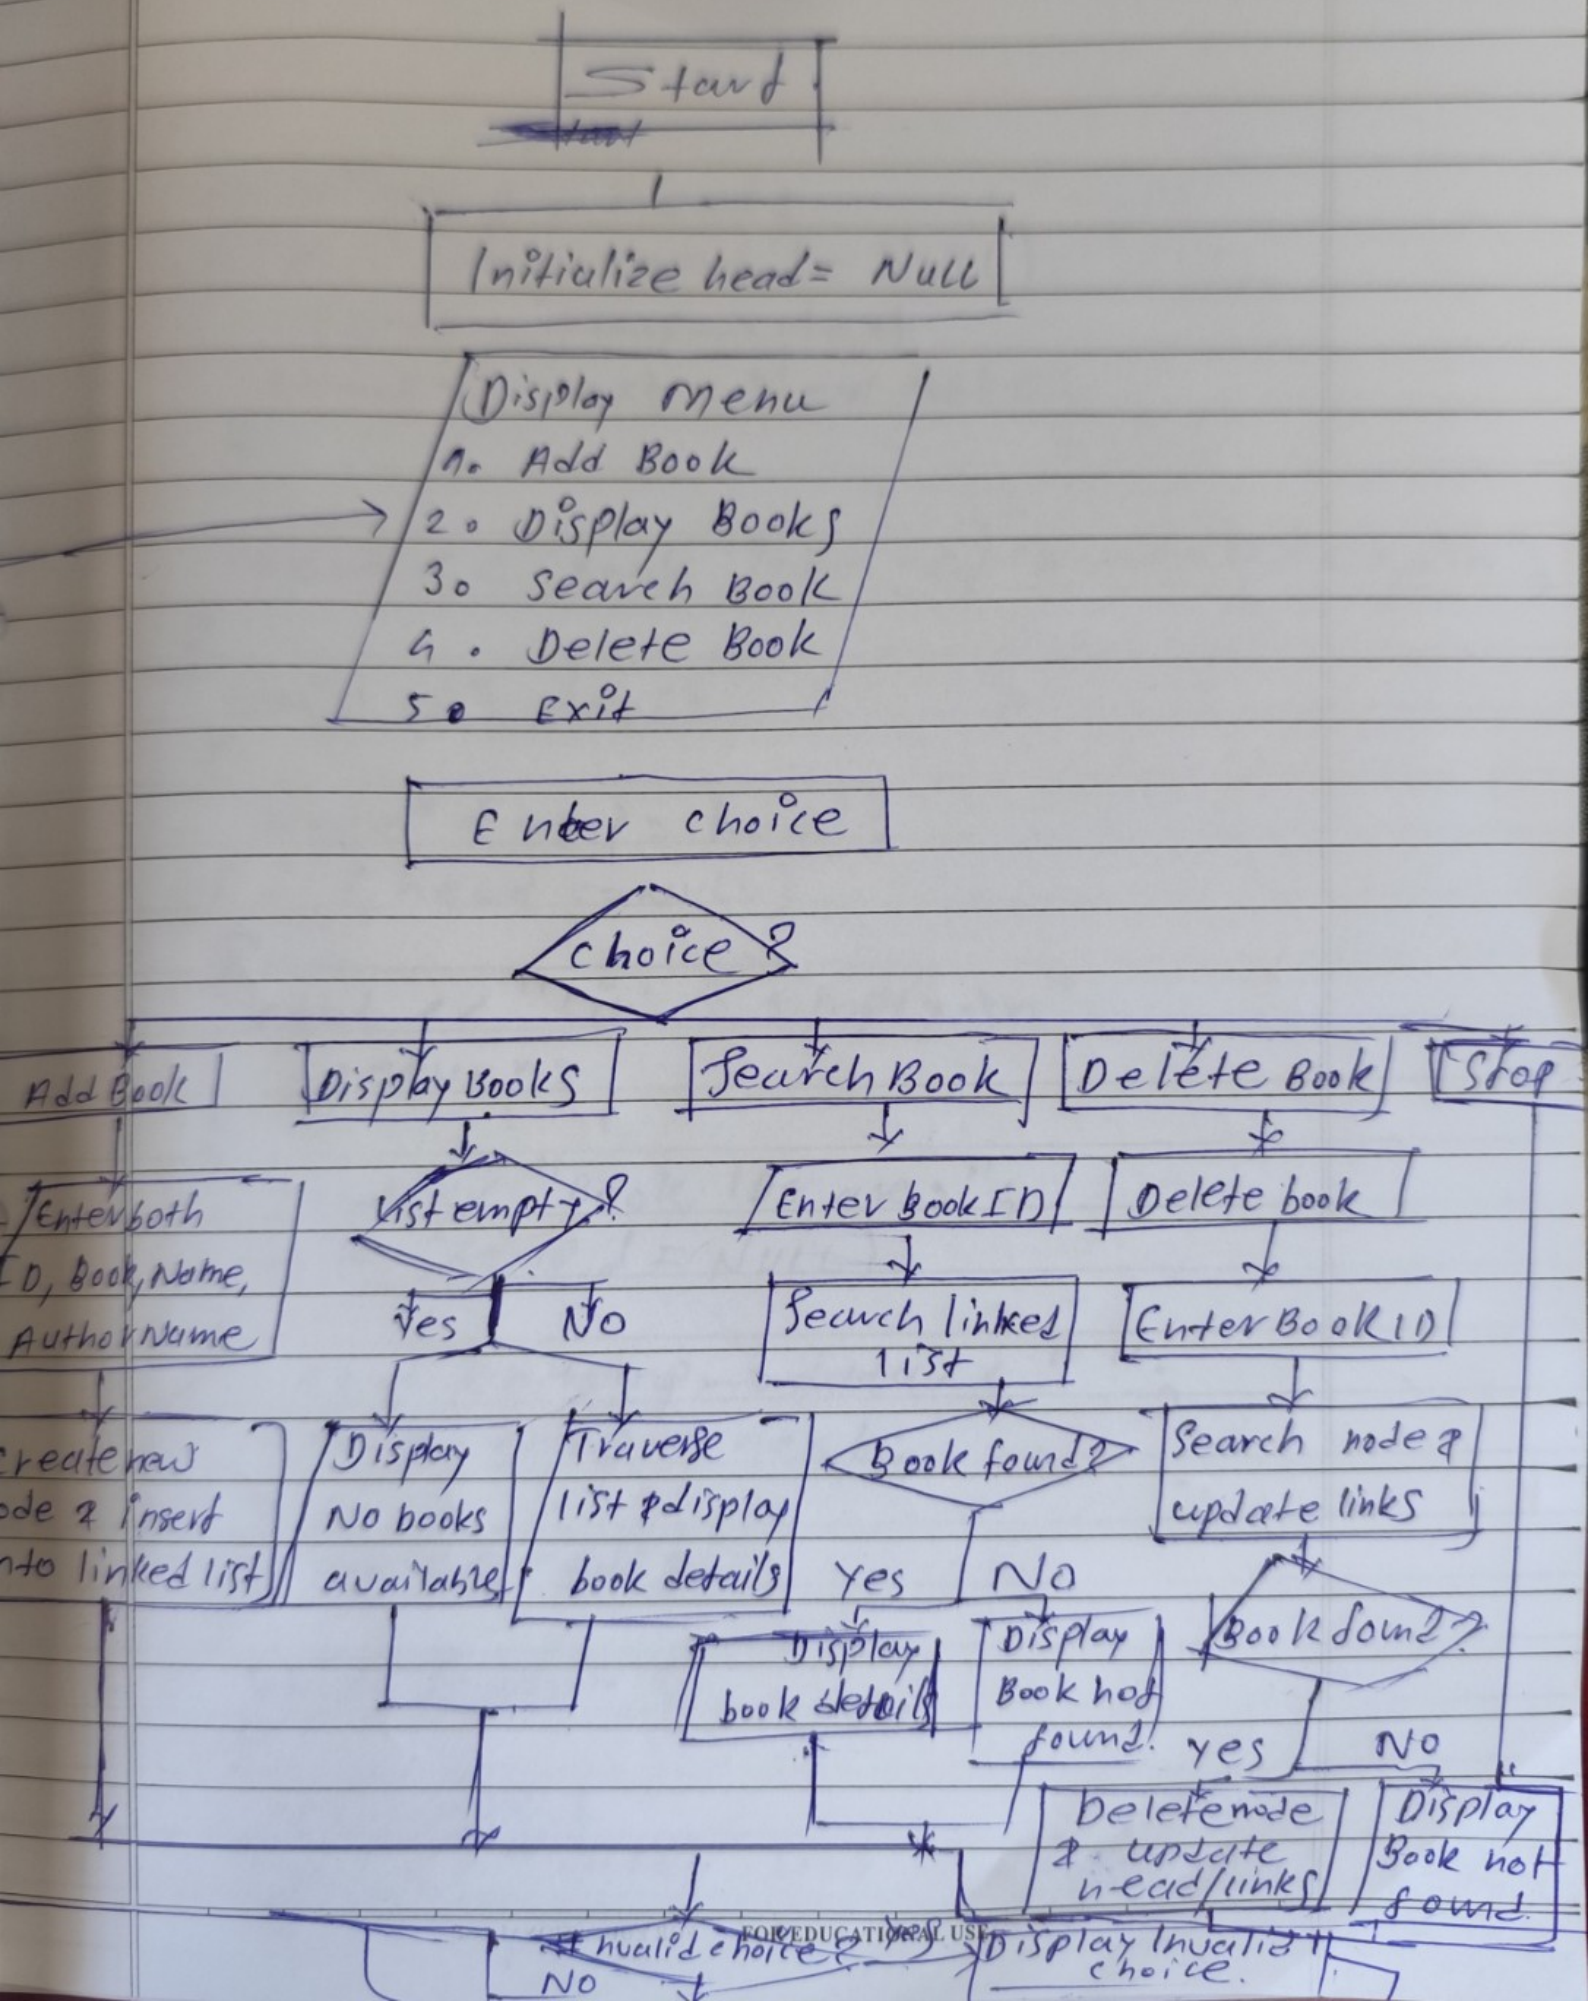

Design & implement a simple Library Book Management system using a singly Linked list in c++. The program performs insertion, display, searching & deletion of book IDs.

objectives
- To understand concept of a singly linked list
- To understand nodes & pointers in c++.
- To perform insertion & deletion operations.
- To search for a particular book.
- To display the elements of a linked list.

Algorithm

1. Start the program.
2. Create a node containing data & a pointer to the next node.
3. Initialize head as NULL.
4. Display the menu.
5. perform Insert, Display, search or Delete according to the user's choice.
